

GROOVY BEATS VR

INSTALLATION GUIDE (via SIDEQUEST)

Step 1.

Great work! You've downloaded the .zip file from the GitHub repo and you've successfully unzipped it and found this little installation guide.

Step 2.

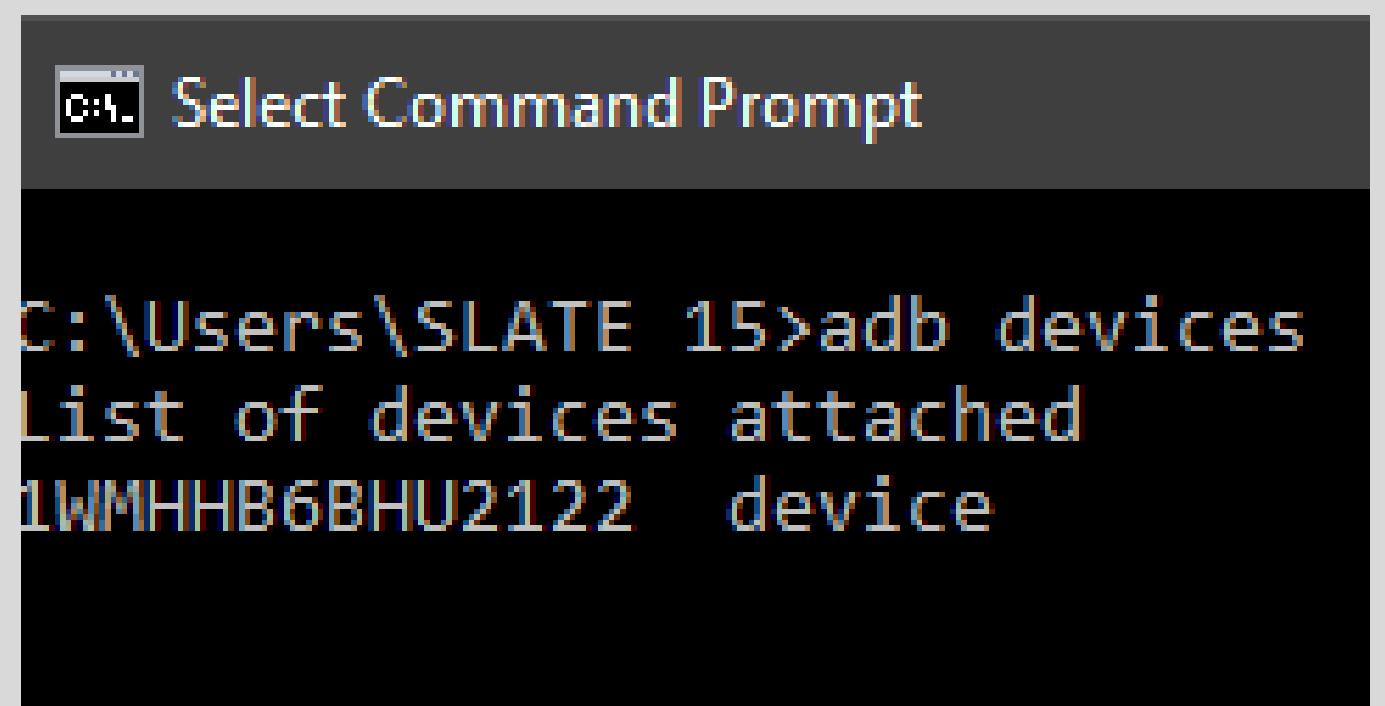

That last bit wasn't much of a step ... anyway! To get Groovy Beats VR all set up to play, you'll need to install SIDEQUEST (You'll want the advanced installer to put APK files onto your headset).

The link for that can be found here: <https://sidequestvr.com/download>

Step 3.

Once SIDEQUEST is all set up and ready to go, make sure your headset is connected to your PC using the provided cable.

To ensure your headset is communicating with your laptop go ahead and open your command prompt and type in the following: **ADB DEVICES**

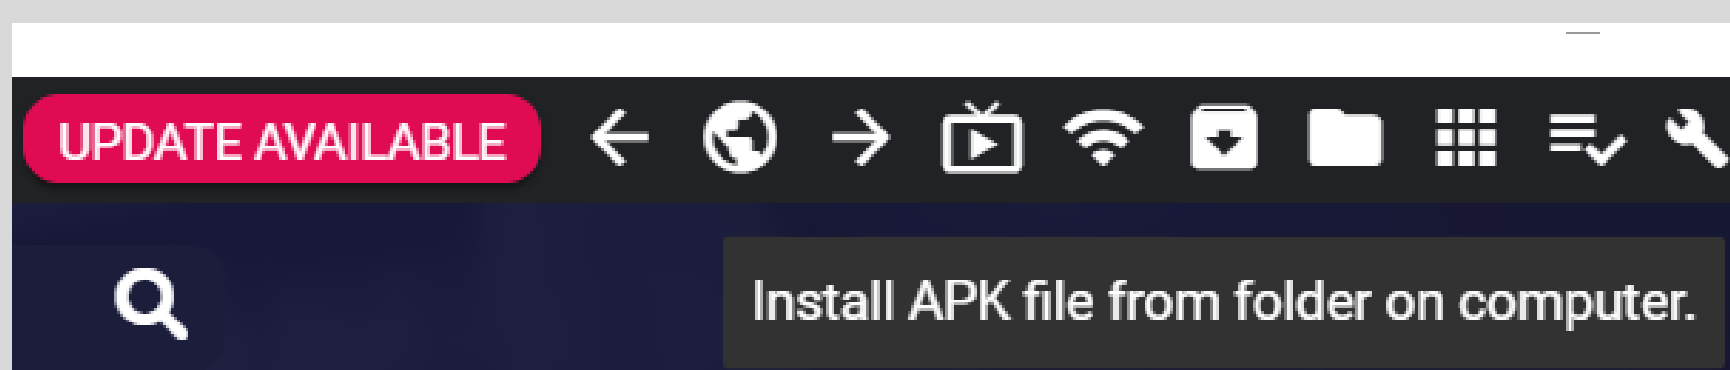

```
C:\Users\SLATE 15>adb devices
List of devices attached
1WMHHB6BHU2122 device
```

You should see something similar to the image above, if your device isn't connected you might need to enable the connection via your headset.

Step 4.

With your Quest 2 and PC ready to go all that's left to do is to click the icon in the top right corner of SIDEQUEST with the downwards arrow and select the .APK file

Step 5.

Upon installation completion, pop your VR headset back on and navigate to 'Unknown Sources' in your App Library and that's where you can hit play on Groovy Beats - Have fun!
